PPL 3/9

Reagan Shirk

March 9, 2020

Midterm

- He's told the TAs to grade *very* generously
- We'll get full credit for the last two problems if we showed that we understood the concept - doesn't matter if we finished the problem
- We'll have an optional assignment 5 that will act as extra points sometime in mid April

Class Stuff

- He's been showing us code for the whole class period so there aren't a lot of notes
- Assignment 3 will be short but it'll be a lot of stuff that we haven't seen before
- Recommends looking over `symtab.hh` and... something else to familiarize ourselves with this syntax
- I really wish I knew what to be taking notes over right now
